

PHP Strings

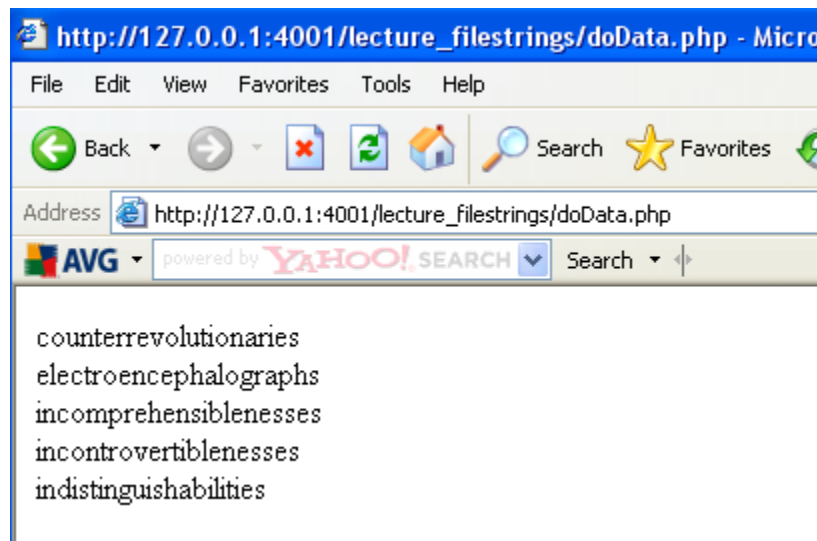

Seminar Exercises

1. Create the following HTML form and save the file as getInput.html

Words in my dictionary

☒ Show all Words
☐ Show all Words in Uppercase
☐ Count all Words
☐ Show Words beginning with
☐ Show Words that have the letter
☐ Show Words that have a length of

2. Create a php file called doData.php and create 6 functions that will deal with the above radio buttons. For example, assume the user selected Show Words that have a length of 22, the following would be expected to be outputted. The dictionary file that you will be using can be downloaded from the website.

3. Apply suitable validation to the html form and format appropriately using CSS.
